EXPERIENCE

Senior Frontend Engineer - Swift (E-commerce)

Feb 2025 – Present

- Led performance optimization initiatives, improving Core Web Vitals from 30 to 85 using Lighthouse and web performance best practices
- Delivered cashback feature in checkout using React and TypeScript, increasing sales by 30%
- Optimized LCP and loading performance with lazy loading, API revalidation, and script deferring
- Reduced third-party script impact by controlling execution timing, improving initial render performance
- Elevated accessibility score from 60 → 100 using semantic HTML and a11y best practices
- Built and maintained scalable component library using Storybook, TypeScript, and design system principles
- Partnered with product and design to deliver UX improvements tied to business outcomes

Tech Stack: React, TypeScript, Remix, Tailwind, GitLab, AWS, Tsup, Testing (Vitest, Unit Tests)

Senior Frontend Engineer — BBTS (Banco do Brasil Tecnologia)

Jan 2023 – Mar 2025

- Led frontend initiatives for a high-scale messaging platform processing 10M+ emails and SMS weekly, focusing on performance, scalability, and system reliability
- Designed and implemented a modular and scalable frontend architecture, improving development velocity and reducing deployment risks
- Defined and maintained a design system, including reusable components, color tokens, and UI standards for consistency across applications
- Improved usability and accessibility (a11y) by applying best practices, enhancing user experience across internal tools
- Implemented unit testing strategy from project inception, consistently maintaining ~90% test coverage to ensure code quality and reliability
- Initiated and supported test automation efforts in collaboration with QA, providing mentorship and promoting best practices across the team
- Enhanced system observability by leveraging Datadog for logging, monitoring, and alerting, improving incident detection and troubleshooting efficiency

Tech Stack: React, TypeScript, Recoil, Clean Architecture, Vitest, Cypress, REST APIs, CMS (GrappesJS), Design Systems, Accessibility (a11y), Distributed Systems, Datadog

Senior Fullstack Developer — DrHoje (Telemedicine)

Oct 2020 – Feb 2026

- Improved telemedicine workflows using React, reducing friction across patient queue and video consultation journeys
- Developed and maintained multiple frontend applications (admin, operational, and patient-facing platforms), ensuring consistency, usability, and accessibility (a11y) across different user roles
- Enhanced user experience (UX) at the code level, optimizing flows for both patients and healthcare professionals
- Supported a high-scale environment handling ~10K daily consultations, ensuring performance and reliability
- Designed and implemented real-time monitoring systems using WebSocket APIs and event-driven architecture, enabling operational teams to track patient journeys from queue entry to consultation completion
- Applied presence concepts to reflect real-time user states, improving visibility and coordination across operational teams
- Integrated multiple services via GraphQL and REST APIs, enabling seamless communication across the platform
- Built responsive and accessible interfaces using modern JavaScript (ES6+), HTML, and CSS

- Developed a notification service using Twilio (IVR/URA) to trigger automated phone calls and improve patient engagement
- Contributed to NPS tracking and user feedback flows, supporting continuous improvement of the patient experience
- Implemented state management using Redux (Flux pattern), ensuring predictable and scalable data flow across complex applications

Tech Stack: React, JavaScript (ES6+), Node.js, Redux, GraphQL, REST APIs, Datadog, Heatmap, WebSockets, HTML, CSS, Real-time Systems, Event-driven Architecture

Mid-level Frontend Engineer — ENGIE

Dec 2021 – Dec 2022

- Migrated a legacy frontend (ASP-based) to a modern JavaScript stack, improving scalability, maintainability, and reducing technical debt
- Applied Clean Architecture principles to decouple business logic from UI layers, enhancing code organization and long-term maintainability
- Helped define frontend architecture and best practices, establishing standards for scalable development
- Implemented virtualized lists with infinite scrolling, significantly improving performance and rendering efficiency for large data sets
- Applied performance optimization techniques, reducing load times and improving overall user experience
- Introduced design tokens and UI standardization, ensuring consistency across the application
- Built modular and maintainable styles using CSS Modules

Tech Stack: React, TypeScript, CSS Modules, Design Systems, Clean Architecture

Mid-Level Frontend Engineer — Keeggo (VOOMP)

Oct 2020 – Dec 2021

- Developed and delivered features for a SaaS platform using React and TypeScript, focusing on scalability and maintainability
- Applied Clean Architecture and SOLID principles, improving code organization and long-term maintainability
- Implemented unit and end-to-end tests using Jest and Cypress, increasing reliability and reducing regressions
- Collaborated with cross-functional teams to deliver consistent and high-quality product features

Tech Stack: React, TypeScript, Jest, Cypress, Clean Architecture, SOLID

Junior Fullstack Developer — DPU

Jan 2017 – Dec 2019

- Developed backend systems using PHP (MVC architecture), supporting internal government applications and improving system reliability and maintainability
- Built a scheduling system, improving service efficiency and streamlining appointment workflows
- Developed dynamic frontend interactions using jQuery and AJAX, enhancing user experience and reducing page reloads
- Created and maintained HTML email templates using table-based layouts, ensuring cross-client compatibility (e.g., Outlook, Gmail)
- Contributed to system maintenance and feature development, ensuring stability and reliability

Tech Stack: PHP, MVC, MySQL, JavaScript, jQuery, AJAX, HTML (Email Templates)

EDUCATION

IESB - Brazil

2018 –

2022 Technologist Degree in Systems Analysis and Development

FullCycle

2026 – Present

MBA in AI Engineering

- Focus on LLM applications, prompt engineering, embeddings, and RAG (Retrieval-Augmented Generation)
- Exploring AI system design, agent-based architectures, and real-world AI integrations

Tech Stack: Python, LangChain, LLMs, Embeddings, RAG

Languages

English - Upper-Intermediate (B2)

Portuguese - Native
